

# Talk with Your Teen About E-cigarettes: A Tip Sheet for Parents

## BEFORE THE TALK

*Know the facts.*

- Get credible information about e-cigarettes and young people at [E-cigarettes.SurgeonGeneral.gov](http://E-cigarettes.SurgeonGeneral.gov).

*Be patient and ready to listen.*

- Avoid criticism and encourage an open dialogue.
- Remember, your goal is to have a conversation, not to deliver a lecture.
- It's OK for your conversation to take place over time, in bits and pieces.

*Set a positive example by being tobacco-free.*

- If you use tobacco, it's never too late to quit. For free help, visit [smokefree.gov](http://smokefree.gov) or call **1-800-QUIT-NOW**.

---

## START THE CONVERSATION

### *Find the right moment.*

- A more natural discussion will increase the likelihood that your teen will listen. Rather than saying “we need to talk,” you might ask your teen what he or she thinks about a situation you witness together, such as:
  - » Seeing someone use an e-cigarette in person or in a video.
  - » Passing an e-cigarette shop when you are walking or driving.
  - » Seeing an e-cigarette advertisement in a store or magazine or on the internet.

### *Ask for support.*

- Not sure where to begin? Ask your health care provider to talk to your teen about the risks of e-cigarettes.
- You might also suggest that your teen talk with other trusted adults, such as relatives, teachers, faith leaders, coaches, or counselors whom you know are aware of the risks of e-cigarettes.
- These supportive adults can help reinforce your message as a parent.

---

## ANSWER THEIR QUESTIONS

Here are some questions and comments you might get from your teen about e-cigarettes and some ideas about how you can answer them.

### *Why don't you want me to use e-cigarettes?*

- Science shows that e-cigarettes contain ingredients that are addictive and could harm different parts of your body.
- Right now, your brain is still developing, which means you are more vulnerable to addiction. Many e-cigarettes contain nicotine, and using nicotine can change your brain to make you crave more nicotine. It can also affect your memory and concentration. I don't want that for you!
- E-cigarettes contain chemicals that are harmful. When people use e-cigarettes, they breathe in tiny particles that can harm their lungs.

- The cloud that people exhale from e-cigarettes can expose you to chemicals that are not safe to breathe.

### *What's the big deal about nicotine?*

- Your brain is still developing until about age 25. The Surgeon General reported that nicotine is addictive and can harm your brain development.
- Using nicotine at your age may make it harder for you to concentrate, learn, or control your impulses.
- Nicotine can even train your brain to be more easily addicted to other drugs like meth and cocaine.

- I don't say this to scare you, but I want you to have the facts because nothing is more important to me than your health and safety.

### *Aren't e-cigarettes safer than conventional cigarettes?*

- Because your brain is still developing, scientific studies show that it isn't safe for you to use any tobacco product that contains nicotine, including e-cigarettes.
- Whether you get nicotine from an e-cigarette or a cigarette, it's still risky.
- Some e-cigarette batteries have even exploded and hurt people.

### *I thought e-cigarettes didn't have nicotine—just water and flavoring?*

- I used to think that too. But many e-cigarettes have nicotine. There are also other chemicals in them that can be harmful.
- Let's look at the Surgeon General's website on e-cigarettes ([E-cigarettes.SurgeonGeneral.gov](http://E-cigarettes.SurgeonGeneral.gov)) together so you can see for yourself.

### *I (or my friends) have tried e-cigarettes and it was no big deal.*

- I appreciate your honesty. In the future, I hope you (or your friends) will stay away from e-cigarettes and other tobacco products, including cigarettes. Science shows that e-cigarettes contain ingredients that are addictive and could harm different parts of your body.
- Next time we go to the doctor, let's ask about the risks of nicotine, e-cigarettes, and other tobacco products.

### *You used tobacco, so why shouldn't I?*

- If I could live my life over again, I never would have started smoking. I learned that people who smoke cigarettes are much more likely to develop, and die from, certain diseases than people who don't smoke. This was really scary, so I quit smoking.
- Quitting was really hard, and I don't want you to go through that. The best thing is to not start at all.

## KEEP THE CONVERSATION GOING

Many parents find that texting is a great way to reach their teens. Here are some suggestions for text messages that might catch your teen's attention. And, you can easily share pages of the website ([E-cigarettes.SurgeonGeneral.gov](http://E-cigarettes.SurgeonGeneral.gov)) with your teen.

Share this page

Look for this symbol, click it, type in the message you want or use the message provided, and share with your teen via Facebook, Twitter, or email.

### *Connect and encourage.*

- You always liked science. Check out the science about e-cigarettes and young people:  
**[E-cigarettes.SurgeonGeneral.gov](http://E-cigarettes.SurgeonGeneral.gov)**
- Getting off nicotine is hard but I'm so happy I quit. Don't make that mistake and get addicted. Smoking and tobacco use, including using e-cigarettes, are unsafe for young people.

### *Remind and repeat.*

- Most teenagers don't use e-cigarettes. E-cigarettes with nicotine can mess with your brain, and your brain is still developing until you are at least 25.
- You might be tempted by e-cigarette flavors, but inhaling certain flavorings that have been found in some e-cigarettes can be harmful.

### *Share facts and resources.*

- Just learned that many e-cigarettes have nicotine in them. That's the drug that makes cigarettes so addictive. Nicotine can also mess with your brain development.
- Just saw a report from the Surgeon General that e-cigarettes can mess with how your brain develops and might even affect your mood and focus. Please don't use any products that contain nicotine.
- Hope none of your friends use e-cigarettes around you. Even breathing the cloud they exhale can expose you to nicotine and chemicals that can be dangerous to your health.

# VAPING & NICOTINE

Electronic cigarettes, aka vapes, are hand-held, battery powered unfiltered nicotine delivery devices that can also be used for marijuana.

## HOW DO VAPES & E-CIGARETTES WORK?

Vapes are devices that heat liquid into an aerosol that the user inhales. The liquid usually has nicotine, flavoring and other additives.

## VAPES & E-JUICE

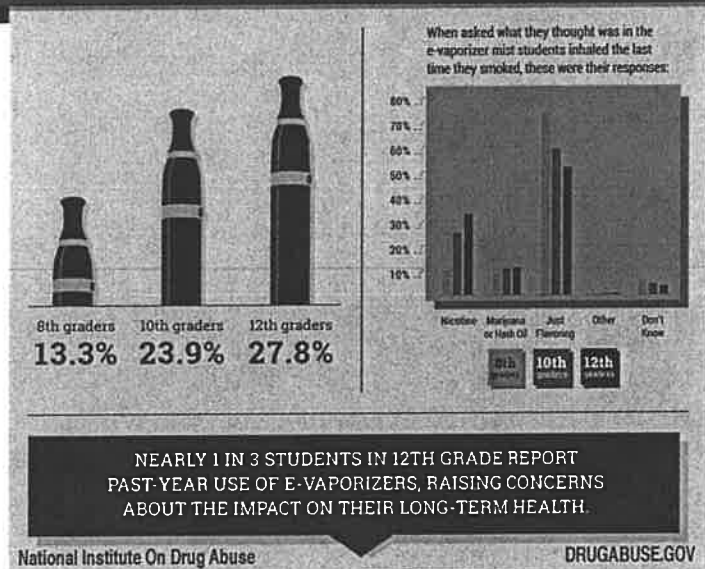

## WHY SHOULD I BE CONCERNED ABOUT YOUTH VAPING?

- Vape pens can be used for other substances, such as marijuana and illicit drugs.<sup>5</sup>
- Teens who vape are **three times** more likely to use marijuana<sup>8</sup> and **six times** more likely to smoke cigarettes than non-cigarette users.<sup>10</sup>
- Nicotine is highly addictive and can affect brain development.<sup>6</sup>
- One JUUL Pod contains the nicotine equivalent of 1 pack of cigarettes. One PHIX pod=nicotine equivalent of 2 packs of cigarettes.
- The number of youth who have used e-cig/vapes has tripled in the last 3 years.<sup>7</sup>
- Minors can easily purchase e-cigs on-line or at convenience stores.<sup>9</sup>
- Ads for e-cigs are targeting adolescents and appear on TV, radio and online.<sup>9</sup>

## ARE THEY SAFE?

- It's believed vapes produce a "water vapor" when in fact they create aerosols that contain harmful chemicals, hazardous particles and toxicants, including known carcinogens such as formaldehyde, cadmium and benzene which are inhaled into the lungs and out into the environment, making them harmful to the user and others nearby.
- The more than 7,700 flavorings (including fruit and sweet, appealing to youth) alone have shown to induce toxicity in the lungs and cardiovascular system.<sup>3</sup>
- There are no safety standards. No safety standards =unknown levels of nicotine & additives.<sup>2</sup>

## PAST-YEAR E-VAPORIZER USE AND WHAT TEENS ARE INHALING

## WHAT CAN I DO?

- Talk to youth about the risks and many unknowns of vaping.
- Be a positive role model.
- Learn more at [GNCY.org](http://GNCY.org) or at [gncy.coordinator@gmail.com](mailto:gncy.coordinator@gmail.com).
